In this morning's SitRep, you might want to confirm numbers under the Water/Wastewater paragraph...

Of the approximately 4500 water systems that were initially projected to be impacted by Hurricane Harvey, approximately **3,607** systems were in the affected area (58 State Declared Counties). Of the systems in the affected areas, **2,175** are ~~public~~ **community** water systems that serve a population of 10,878,982 and **596** are non-transient non-community (NTNC) water systems that serve hospitals, health care facilities, nursing homes and day cares, with a population of 216,871.
 $2,175 + 596 = 2,771$

$3,607 - 2,771 = 836$ seem to be missing off the 3,607 (**Actually 836 are Transient Systems**)
Am I missing something.. ??

With Regards, Steve
